Re: TPE vs PVC

Dear Mirtha

In Feb 2010 ADC changed from TPE to PVC on our Supeflex Version of GTO in order to achieve a more flexible cable. This cable still meets all the GTO and Igniter Wire UL and cUL ratings and requirements.

We believe that this construction is far more superior than the previous TPE version as it has superior flexibility and the overall appearance of the cable is better since the black die is more easily accepted by the PVC.

Please feel free to contact ADC if you have any additional questions or concerns.
